

Virtual Waiting Room

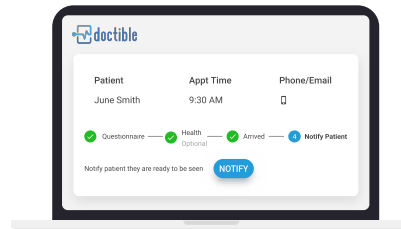

Doctible's Virtual Waiting Room makes it easy and safe for practices to screen patients and streamline the check-in process

*** Be sure to mention CSDA at sign up to receive special introductory pricing!**

Practices need to adapt to the contactless era to ensure patient and staff safety. Doctible allows practices to perform all pre-arrival tasks effectively and control the flow of patients to the practice in an efficient manner

How it Works

1 Pre-Arrival Health Questionnaire

Patient receives a text 2 hours prior to appointment with a link to fill out health questionnaire and practice protocols

2 Health Questionnaire Completed

Patient completes questionnaire and is informed of virtual waiting room depending on the answers to the questions

3 Patient Health Status Ticker Updated

Doctible dashboard updates with patient's health status for review by staff

4 Patient Arrival Indicator

Patient sends a text to indicate they have arrived and Doctible arrival ticker is updated in the dashboard

5 Ready for Patient

Once the staff is ready, they can easily click on patient name to notify them that they are ready to be seen along with instructions

Benefits

Contactless Intake to ensure safety

Streamline patient check-in

Increased patient satisfaction

Reduces practice liability

Two-way communication to simplify patient outreach
